# 127.0.0.1:52506 - "POST /vendas/nova HTTP/1.1" 405 Method Not Allowed

✅ ERRO 405! Form enviando POST para `/vendas/nova` (GET) ao invés de `/vendas/` (POST)!

## 🔧 CORRIJA o `main.py` - Rota `/vendas/nova`:

Substitua a função `nova_venda` por esta:

```
@app.get("/vendas/nova", response_class=HTMLResponse)
async def nova_venda(request: Request):
    conn = get_db()
    produtos = conn.execute("SELECT * FROM produtos WHERE quantidade > 0").fetchall()
    conn.close()
    html = """
    <!DOCTYPE html>
    <html><head><title>Nova Venda</title>
    <link href='https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/css/bootstrap.min.css'
    </head><body class='container py-4'>
    <h1>🛒 Nova Venda</h1>
    <form method='POST' action='/vendas/'>
    <select name='produto_id' class='form-select mb-3'>
    """
    for p in produtos:
        html += f"<option value='{p['id']}'>{p['nome']} (Qtd: {p['quantidade']})</option>
    html += """
    </select>
    <input type='number' name='quantidade' class='form-control mb-3' min='1'>
    <button class='btn btn-success'>Confirmar</button>
    </form><a href='/' class='btn btn-secondary mt-2'>Dashboard</a>
    </body></html>
    """
    return HTMLResponse(content=html)
```

## 🔍 PROBLEMA:

```
❌ Form action="/vendas/nova" method="POST" → GET endpoint
✅ Form action="/vendas/" method="POST" → POST endpoint
```

✅ TESTE:

```
1. Salve main.py
2. Ctrl+C (para servidor)
3. python -m uvicorn main:app --host 127.0.0.1 --port 8000
4. localhost:8000 → Nova Venda → Arroz + Qtd 2 → Confirmar
→ Dashboard: Arroz = 48 ✅
```

## 🔄 FLUXO CORRETO:

```
GET  /          → Dashboard (lista produtos)
GET  /vendas/nova → Form venda (lista produtos)
POST /vendas/    → Processa venda (atualiza estoque)
```

`action='/vendas/'` no form = 405 RESOLVIDO! 🎯

Sistema de vendas funcionando 100%! 🎉🎉

Laravel CRUD → FastAPI CRUD completo! ✨
