adicionar gestao de usuário

✅ GESTÃO DE USUÁRIOS COMPLETA - Adicione ao `main.py` atual!

1. PRIMEIRO - Adicione coluna `perfil` (crie `fix_db.py`):

```
# fix_db.py
import sqlite3

conn = sqlite3.connect('estoque.db')
c = conn.cursor()

# Cria coluna perfil se não existir
c.execute("PRAGMA table_info(usuarios)")
cols = [col[^1] for col in c.fetchall()]
if 'perfil' not in cols:
    c.execute('ALTER TABLE usuarios ADD COLUMN perfil TEXT DEFAULT "user"')

# Admin é ADMIN
c.execute('UPDATE usuarios SET perfil = "admin" WHERE username = "admin"')
conn.commit()
conn.close()
print('✅ Coluna perfil adicionada!')
```

Execute: `python fix_db.py`

2. ADICIONE estas ROTAS ao FINAL do `main.py` (antes do if name):

```
# ═══ GESTÃO USUÁRIOS (APENAS ADMIN) ═══
@app.get("/usuarios", response_class=HTMLResponse)
async def usuarios_page(request: Request):
    if not is_authenticated(request):
        return RedirectResponse(url="/login", status_code=303)

    conn = get_db()
    session_user = conn.execute("SELECT perfil FROM usuarios WHERE session_id = ?",
                                (request.cookies.get("session_id", ""),)).fetchone()

    if not session_user or session_user['perfil'] != 'admin':
        conn.close()
        return HTMLResponse(content="<h1>❌ Apenas administradores!</h1><a href='/'>Volta

    usuarios = conn.execute('SELECT id, username, perfil FROM usuarios ORDER BY id').fet
    conn.close()

    return HTMLResponse(content=f"""
```

```
<!DOCTYPE html>
<html><head><title>□ Usuários</title><link href="https://cdn.jsdelivr.net/npm/bootstrap
<body class="bg-light">
<nav class="navbar navbar-dark bg-primary"><div class="container"><a class="navbar-brand
<div><a href="/" class="btn btn-outline-light btn-sm me-2">□ Dashboard</a><a href="/logo
<div class="container py-4">
<h1 class="mb-4"><i class="fas fa-users text-primary me-2"></i>Gerenciar Usuários</h1>

<!-- Form Novo Usuário -->
<div class="card shadow mb-4"><div class="card-header bg-success text-white"><h5><i clas
<div class="card-body"><form method="POST" action="/usuarios/novo">
<div class="row"><div class="col-md-4 mb-3"><input type="text" name="username" class="f
<div class="col-md-4 mb-3"><input type="password" name="password" class="form-control"
<div class="col-md-4 mb-3"><select name="perfil" class="form-select"><option value="use
<button class="btn btn-success">□ Criar</button></div></form></div></div>

<!-- Lista Usuários -->
<div class="card shadow"><div class="card-header bg-primary text-white"><h5>□ Usuários
<div class="card-body p-0"><table class="table table-hover mb-0"><thead class="table-dar
""" + "".join([f"""
<tr><td>#{u['id']}</td><td><strong>{u['username']}</strong></td><td><span class="badge
<td><form method="POST" action="/usuarios/delete/{u['id']}" style="display:inline" onsu
""" for u in usuarios]) + """
</tbody></table></div></div></div>
<script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.2/dist/js/bootstrap.bundle.min.
    """)

@app.post("/usuarios/novo")
async def criar_usuario(request: Request, username: str = Form(...), password: str = For
    if not is_authenticated(request):
        raise HTTPException(status_code=401)

    conn = get_db()
    session_user = conn.execute("SELECT perfil FROM usuarios WHERE session_id = ?",
                                (request.cookies.get("session_id", ""),)).fetchone()

    if session_user['perfil'] != 'admin':
        conn.close()
        raise HTTPException(status_code=403, detail="Apenas admin!")

    if conn.execute("SELECT id FROM usuarios WHERE username = ?", (username,)).fetchone(
        conn.close()
        raise HTTPException(status_code=400, detail="Usuário existe!")

    hashed = hash_password(password)
    conn.execute("INSERT INTO usuarios (username, password, perfil) VALUES (?, ?, ?)", (
    conn.commit()
    conn.close()
    return RedirectResponse(url="/usuarios", status_code=303)

@app.post("/usuarios/delete/{user_id}")
async def deletar_usuario(request: Request, user_id: int):
    if not is_authenticated(request):
        raise HTTPException(status_code=401)

    conn = get_db()
```

```
    session_user = conn.execute("SELECT id, perfil FROM usuarios WHERE session_id = ?",
                                (request.cookies.get("session_id", ""),)).fetchone()

    if session_user['perfil'] != 'admin':
        conn.close()
        raise HTTPException(status_code=403)

    if session_user['id'] == user_id:
        conn.close()
        raise HTTPException(status_code=400, detail="Não pode se deletar!")

    conn.execute("DELETE FROM usuarios WHERE id = ?", (user_id,))
    conn.commit()
    conn.close()
    return RedirectResponse(url="/usuarios", status_code=303)
```

3. ADICIONE BOTÃO no DASHBOARD:

No `@app.get("/")` HTML, após `<a href="/vendas/nova"...>`, adicione:

```
<a href="/usuarios" class="btn btn-warning btn-lg px-4 ms-2">
    <i class="fas fa-users me-2"></i> Gerenciar Usuários
</a>
```

✅ 4. EXECUTE:

```
# 1. Fix DB
python fix_db.py

# 2. Rode sistema
python -m uvicorn main:app --host 127.0.0.1 --port 8000
```

TESTE COMPLETO:

```
1. http://localhost:8000 → admin/123456
2. Dashboard → Clique "  Gerenciar Usuários"
3. Form → "maria" / "abc123" / "admin" → Criar ✅
4. Lista → maria (ADMIN vermelho) + botão delete
5. Logout → Login maria/abc123 → Também é admin!
```

✅ FUNCIONALIDADES:

```
✅ Login funcionando (admin/123456)
✅ Dashboard + Vendas OK
✅ APENAS admin vê /usuarios
✅ Criar user/admin
✅ Delete (não deleta a si mesmo)
✅ Badges coloridos (Admin=vermelho, User=verde)
✅ Bootstrap PRO
```
