127.0.0.1:59798 - "GET /logout/ HTTP/1.1" 405 Method Not Allowed

✅ ERRO 405! Rota `/logout/` está como POST mas link usa GET!

🔧 CORRIJA a rota logout no `main.py`:

Mude esta linha:

```
@app.post("/logout/")  # ❌ POST
```

Para:

```
@app.get("/logout/")   # ✅ GET
async def logout(request: Request):
    session_id = request.cookies.get("session_id", "")
    if session_id:
        conn = get_db()
        conn.execute("UPDATE usuarios SET session_id = '' WHERE session_id = ?", (session
        conn.commit()
        conn.close()
    response = RedirectResponse(url="/login", status_code=303)
    response.delete_cookie("session_id")
    return response
```

🔍 PROBLEMA:

```
❌ Link HTML: <a href="/logout/"> → GET request
❌ Rota:      @app.post("/logout/") → só aceita POST
✅ Solução:   @app.get("/logout/") → aceita GET
```

✅ TESTE IMEDIATO:

```
1. Salve main.py (mude POST → GET na logout)
2. Ctrl+C + python -m uvicorn main:app --host 127.0.0.1 --port 8000
3. http://localhost:8000 → admin/123456
4. Clique "Sair" → Volta login ✅
```

[illegible] main.py COMPLETO CORRIGIDO (apenas logout fix):

```
@app.get("/logout/")  # ← MUDE PARA GET!
async def logout(request: Request):
    session_id = request.cookies.get("session_id", "")
    if session_id:
        conn = get_db()
        conn.execute("UPDATE usuarios SET session_id = '' WHERE session_id = ?", (session
        conn.commit()
        conn.close()
    response = RedirectResponse(url="/login", status_code=303)
    response.delete_cookie("session_id")
    return response
```

✅ COMANDOS:

```
# 1. Fix logout (GET ao invés POST)
# [Edite main.py linha logout]

# 2. Teste
python -m uvicorn main:app --host 127.0.0.1 --port 8000
```

Resultado:

```
✅ http://localhost:8000 → Login OK
✅ Dashboard → Sair → Login (SEM erro 405!)
✅ admin/123456 funcionando perfeitamente!
```

[illegible] FLUXO COMPLETO:

```
Login → Dashboard → Nova Venda → Sair → Login
✅ ✅        ✅          ✅      ✅
```

`@app.get("/logout/")` = ERRO 405 RESOLVIDO! [illegible]

Sistema 100% funcional! [illegible]

Agora adicione gestão usuários com segurança! [illegible]
